

Data leader with a hands-on engineering background. Built and led the data function at KR&A from junior to Head of Data, delivering spatial data products to institutional investors and European statistical offices. Comfortable owning both the roadmap and the pipeline.

SELECTED ACHIEVEMENTS

- Technical lead on a three-year Eurostat study on house-price indices from web-scraped listings across 13 EU countries; officially published by Eurostat.
- Built the Global Connectivity Score from client question to production API, computed live for any coordinate across 38 countries; now integrated into a.s.r. real assets investment partners' PULSE platform.
- Replaced CSV-based data management with a distributed Airflow platform on Iceberg and FastAPI, making the platform reproducible and cutting infrastructure cost.
- Built LLM and OCR pipelines that replaced manual document parsing, saving weeks of manual data entry, and introduced agentic workflows and monitoring into internal operations and the production platform.

TOOLS

Python · SQL · PostGIS · Airflow · Iceberg · DuckDB · FastAPI · Docker · Linux servers · CI/CD

PROFESSIONAL EXPERIENCE

KR&A, Amsterdam

Oct 2021 – present

Head of Data · Jul 2025 – present

- Lead the data team (built up to four engineers) and own the data function: architecture, delivery and the transformation of the product offering.
- Run the data platform in production on 8 distributed servers, with agentic monitoring and containerised deployment; the Connectivity Score build processed 1TB+ across 13 servers.
- Own the client relationships: pension funds, real estate investors and national statistical offices; present and defend methodology to portfolio managers, senior stakeholders and Eurostat and CBS statisticians.

Data Scientist & Technical Lead · Jun 2022 – Jul 2025

- Technical lead on two multi-year engagements, including the three-year Eurostat study: led the technical side for eight people across a two-organisation consortium; the Head of Data title formalised a responsibility held since 2022.
- Drove the re-architecture from legacy systems to Airflow, Iceberg and FastAPI, from the decision through migration and operation.
- Built and operated production pipelines, including a weekly scrape of 300k records feeding spatial data products; client-facing throughout with CBS, Eurostat and pension funds.

Junior Data Scientist · Oct 2021 – Jun 2022

- Flood-occurrence prediction from alternative data (BSc-thesis project); 97% accuracy in risk classification.
- Improved the core spatial API's response times tenfold through geospatial query optimisation, resulting in promotion.

Junior Full-Stack Developer, Exact (formerly SRXP) (part-time): expense management software (EmberJS, Sep 2019 – Oct 2021 PHP)

Research · Independent, 2025 – present

Calibrating Free Postcode Boundaries from OpenStreetMap (release expected 2026). MSc thesis: Building an Agent-Based Model to Explain Gentrification in European Cities (8/8).

EDUCATION

MSc Data Science & Business Analytics, Bocconi University · 107/110

2023 – 2025

Focus: Finance · Econometrics · Statistics · NLP

BSc Artificial Intelligence, University of Amsterdam

2019 – 2023

Certifications: DataExpert.io Data Engineering Boot Camp, Aug 2025.

SELECTED PROJECT

Research pipelines as production systems (personal platform)

Airflow 3 platform hosting my research projects, scaled from a laptop to a multi-machine Celery cluster: idempotency guards, custom operators and automated recovery, run as production infrastructure on own servers.

LANGUAGES & SOFT SKILLS

Dutch C2 · English C2 · Italian B2/C1 · German B2 · Spanish A2

Multi-year project management · Client & stakeholder communication · Presenting and defending methodology to technical and senior audiences
